## ROBOTIS DREAM II – School Set

UGA Summer Academy 2018

Robotics Course Preview

2

## TOPICS – Day 1

- Overview of selected robotics design concepts such as mechanical components (plates, brackets, linkages and fasteners), mechanical gear-reduction system for electric motors and conversion of rotational circular motion to a "hopping", "walking" or "crawling" motion.

### ROBOTIS Rivet System

- Rivet components: Sleeve and Stem

- Two sizes:
  - Long (grey only)
  - Short (multi-color)

UGA Summer Academy 2018

Robotics Course Preview

3

## ROBOTIS DREAM II – Level 1

- Mechanical Engineering concepts.
- Using R+Design Software Tool.

UGA Summer Academy 2018

5

## 4-WHEEL DRIVE DUMP TRUCK

- Gears and Gear Ratio.

UGA Summer Academy 2018

Robotics Course Preview

6

### Gear-like Functionality

- The PLAY700 kit does not have actual GEAR components, but ones can obtain "gear-like" functionality using the "pulley-wheels" and the "rubber tires" that came with the kit.

### After 3 PM – Start Building AVOIDER

UGA Summer Academy 2018

Robotics Course Preview

11

### TOPICS – Day 2

- Getting into DREAM II **Level 2** (12 programmable robots):
  - Hardware.
  - Software.
- Hands-on training with **AVOIDER**:
  - Programming Motors, built-in NIR Sensors & Sound Generator.
  - **Autonomous Behaviors**:
    - Spinning Top (1 NIR Sensor).
    - Avoider (2 NIR Sensors).
    - Avoider's "Emergent Behavior".
    - Follower (2 NIR Sensors).

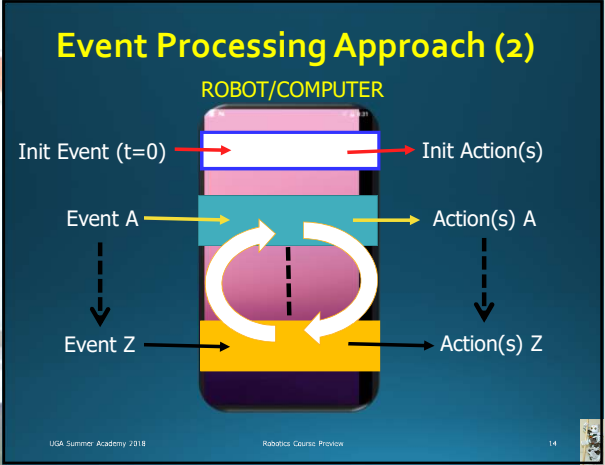

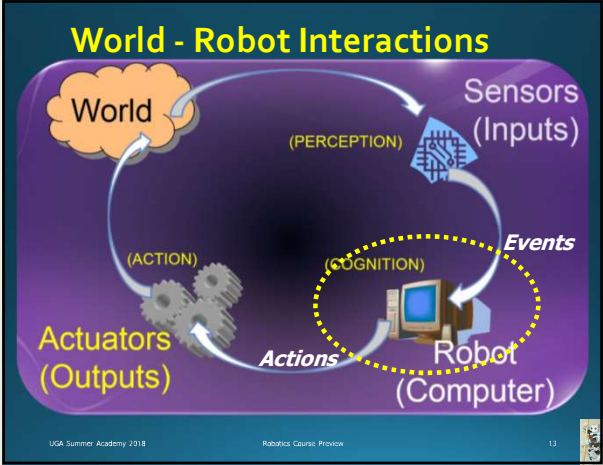

UGA Summer Academy 2018

Robotics Course Preview

12

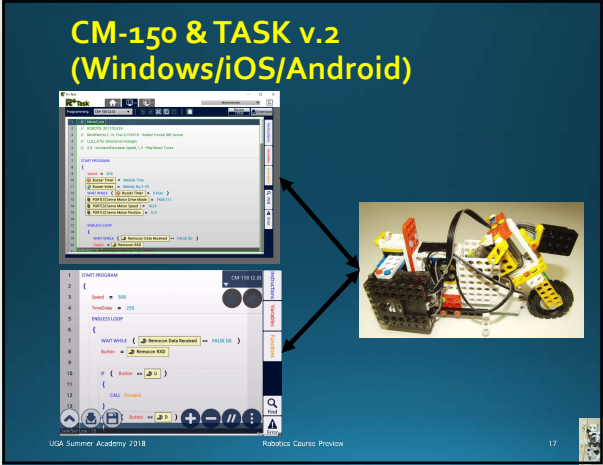

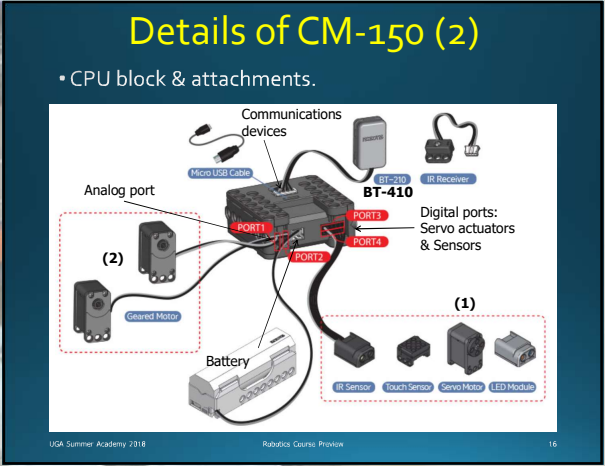

### Reactive Control/Behavior (1)

Given Condition (Event) >> Appropriate Robot Action

Condition/Event	Action
Car on top of Track	Car Goes Forward
Car left of Track	Car Turns Right
Car right of Track	Car Turns Left
Paper Cup detected	Pick Up, Dispose of Paper Cup & Rotate Left until Original Direction

1 and Only 1 Condition (Event) can happen at any 1 time.  
Multiple Conditions (Events) can happen at any 1 time.

- ### R+TASK Practice on Spinning Top
- Print & Println. (Assignment & Sequence of Actions)
  - How to read/print NIR Sensors. (Endless Loop)
  - How to use Hi-Res Timer. (Wait While Loop)
  - How to turn on/off Geared Motors. (Wait While Loop)
  - Use NIR Sensor Values for Motor Speed Control. (Combining Conditional & While Loop structures)
  - Program Modularization with Functions:
    - Maneuvers-1.tsx
    - Maneuvers-2.tsx
    - Maneuvers-3.tsx
    - Maneuvers-4.tsx
-

### "Avoider" Refinement (2)

Re-Analysis of Condition/Action Table:  
Find DEFAULT BEHAVIOR (Going Forward).  
Find ESSENTIAL BEHAVIORS (Backs Right and Backs Left).

Condition/Event	Action
No Object in Front	Bot Goes Forward ←
Object on Left	Bot Backs Right
Object on Right	Bot Backs Left
<del>Object in Front</del>	<del>Backward + Left/Back</del>

### "Emergent" Code Behaviors

Try various AVOIDER versions to see how Robot behaves in dealing with a Hallway.

Why would certain codes work or not work?

### Sound Claps Applications

- Using Sound Claps to start (1 clap) & stop Robot (2 claps).
- 1 clap to Turn Right and 2 claps to Turn Left.
- Video Demo of "Seal" Robot.

### Autonomous Behavior (3)

- Technique 3 is a variation of Technique 2 and it uses "parallel" LOOP WHILEs instead of "parallel" IFs. It combines "Data Acquisition" tasks in its Conditional Statements, thus it uses the least number of statements, as compared to the other two Techniques.
- Example programs using Technique 3 are "Avoider-4b.tskx" and "Follower-1.tskx".
- "Follower-2.tskx" is a hybrid solution combining Techniques 3 and 1.

### Topics – Day 3

- Modify Avoider into Simple CarBot.
- Advanced Autonomous Behavior:
  - Line Follower / Line Avoider.
  - Line Follower + Obstacle Avoider.
- Remote Control:
  - "Remocon" Packet.
  - RC with 1 Button.
  - RC with Multiple Buttons.
  - PC and Mobile Interfaces.
- Mixing Remote Control & Autonomous Behavior:
  - Smart Avoider.

### Navigating Arbitrary Black Track

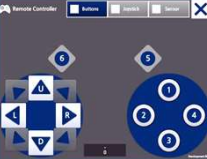

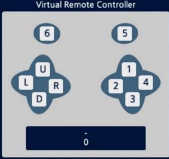

### "Remocon" Packet

Virtual Remote Controller

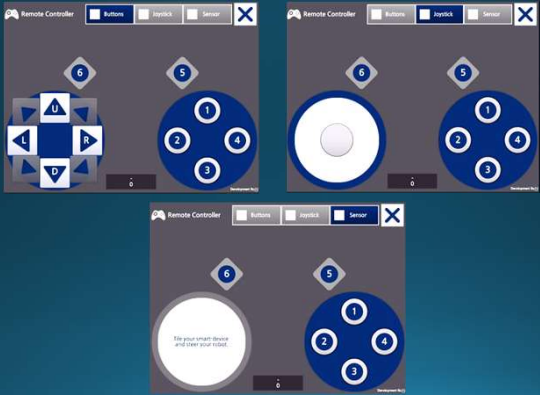

RC-100 10-bit Message										
Bit Position	9	8	7	6	5	4	3	2	1	0
Button	6	5	4	3	2	1	R	L	D	U
Example Data	0	0	0	1	0	0	1	0	0	1

When Button(s) released a "0" is sent ONCE

### Application to Mobile Virtual RC

USA Summer Academy 2018Robotics Course Preview26

### "RC-MultiDirectionsSpeeds-Mobile.tsx" (3)

```
ELSE IF ( Direction == D+R )
{
  CALL Backward
  CALL Delay
  CALL Left
  CALL Delay
}
ELSE IF ( Direction == D+L )
{
  CALL Backward
  CALL Delay
  CALL Right
  CALL Delay
}
```

```
IF ( Button1 == 1 )
{
  Speed = 400
}
IF ( Button3 == 3 )
{
  Speed = 800
}
Direction = 0
Button1 = 0
Button3 = 0
```

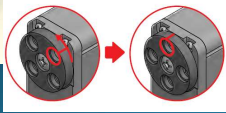

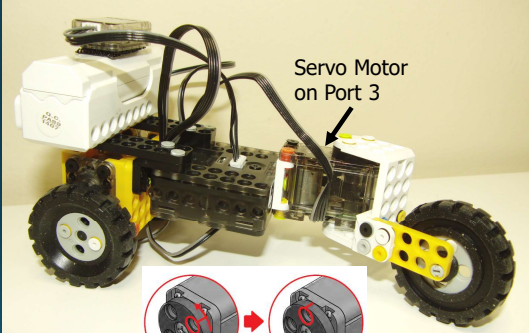

USA Summer Academy 2018Robotics Course Preview27

### Smart Avoider (RC + Autonomous)

USA Summer Academy 2018Robotics Course Preview28

### Build "TriCycle" for Day 4

USA Summer Academy 2018Robotics Course Preview29

### Topics – Day 4

- Differences between Geared Motors and Servo Motors.
- Applications to TriCycle, 4W-Drive Dump Truck.
- Students start designing their own robot to compete on Day 5.

USA Summer Academy 2018Robotics Course Preview30

Position Control of Servo Motor

TriCycle's Ground Contact Geometry

"RC-TriCycle.tsx" (4)

```
ELSE IF ( Direction == D+R )
{
  PORT[3]:Servo Motor Position = PORT[3]:Servo Motor Position - 25
  SpeedDif = SpeedDif + 3
  SpeedL = Speed + SpeedDif
  SpeedR = Speed - SpeedDif
  CALL CheckSpeeds
  CALL Backward
  CALL Delay
}
ELSE IF ( Direction == D+L )
{
  PORT[3]:Servo Motor Position = PORT[3]:Servo Motor Position + 25
  SpeedDif = SpeedDif + 3
  SpeedL = Speed - SpeedDif
  SpeedR = Speed + SpeedDif
  CALL CheckSpeeds
  CALL Backward
  CALL Delay
}
```

"RC-TriCycle\_LR\_Pulse.tsx" (4)

```
ELSE IF ( LR_Direction == L+R )
{
  LR_Direction = Remocon RXD & L+R
  LOOP WHILE ( LR_Direction == R )
  {
    LR_Direction = Remocon RXD & L+R
  }
  Buzzer Timer = 0.2sec
  Buzzer Index = Sol (10)
  PORT[3]:Servo Motor Position = PORT[3]:Servo Motor Position - 15
  SpeedDif = SpeedDif + 10
  SpeedL = Speed + SpeedDif
  SpeedR = Speed - SpeedDif
  CALL CheckSpeeds
  CALL Right
}
```

Build 4W-Drive Dump Truck

"4W\_Drive\_DumpTruck.tsx" (6)

```
ELSE IF ( Remocon RXD == 1 )
{
  PORT[3]:Servo Motor Position = 850
}
ELSE IF ( Remocon RXD == 3 )
{
  PORT[3]:Servo Motor Position = 512
}

ELSE IF ( Remocon RXD == 5 )
{
  IF ( ServoPosition < 850 )
  {
    ServoPosition = ServoPosition + 50
    PORT[3]:Servo Motor Position = ServoPosition
    CALL Delay
  }
}
ELSE IF ( Remocon RXD == 6 )
{
  IF ( ServoPosition > 512 )
  {
    ServoPosition = ServoPosition - 50
    PORT[3]:Servo Motor Position = ServoPosition
    CALL Delay
  }
}
```

"5" for incremental raising of platform  
"6" for incremental lowering of platform

"1" to fully raise platform  
"3" to fully lower platform

Design & Build Battle Bot

UGA Summer Academy 2018

Robotics Course Preview

37

Topics – Day 5

- Students continue with designing & building their own robot to compete on Afternoon of Day 5.
- Concurrent Demonstrations:
  - SCRATCH 2 + DREAM robots.
  - Seal with Servo Head.
  - MotoCycle.
  - Bull with Color Sensor.
  - Raccoon with PIR Sensor.
  - Dowel Scanner.
  - Probe Car.
  - Interfacing DREAM robots with Smart Devices.
  - ROBOTIS MINI.
  - ROBOTIS SMART.

41

Battle Royale (Day 5 - afternoon)

- Student-Created Goals:
- Push opponent out of Arena
  - Flip opponent or immobilize it
- One-on-One Contest
  - Every-Bot-In Contest
    - (Last Bot "standing" wins)
